General help and questions - if uncertain where to ask a question, post in this topic. Если не уверены, где задать вопрос, пишите в этот топик.

Download Mirrors / Зеркала

Note, that the mirrors not marked as **LG-project server** are private projects and are cooperating with us voluntarily. If you decide to make a donation, the assets will be received by the corresponding owners. LG receives contributions only from the LG-project servers.
libgen.in - 1M (**LG-project server**). upload and check uploaded books here, may go off-line sometimes. The other mirrors synchronize with this server later.
gen.lib.rus.ec - 1M (**only search**) (**LG-project server**)
bookzz.org - 1M, apart from the LG content, it has other documents indexed
bookfi.org - 700k, sourced from LG plus other collections
libgen.info - 1M
www.libgen.info, 1M - not the same as libgen.info, it's a separate machine
libgen.net - 1M, forward to libgen.info (or http://www.libgen.info, I don't remember)
vnuki.org - a young project mirroring us, it has a very flexible Web-API
I2P network - 1M, secure I2P network, at the moment the speeds are reasonably good: a 2-GB download in one night reported.

How to upload a book / Включение книг в библиотеку

Web-uploader - online book uploader and MD5-search. Login: **genesis**, Password: **upload**. It's the fastest way to upload a book, if you wish to upload a relatively small collection, it does not require to install anything, it's a completely Web-based version. (Russian) Это наибыстрейший способ загрузить одну или несколько книг, поскольку не требует установки чего-либо - полностью Web-версия.
Массовая загрузка (**LGUploader**) (**OBSOLETE** / **УСТАРЕЛО**) (**Irbis**) - программа, позволяет гибко управлять процессом загрузки и оформлением библиотечных записей целых коллекций. Выявляет дубли, извлекает ISBN, получает библиографическую информацию из онлайн-источников по ISBN. Если коллекция насчитывает более десятка книг, выгоднее воспользоваться этим способом загрузки.
Call back - book pick-up from other sites by URLs. If you have a link to the book that you didnt find in LG, drop the link in this topic and one of us will integrate it into LG. Use this method only if you cannot upload the book yourself, e.g. when the Web-based uploader fails for some reason or the site is down or your battery is getting quickly discharged etc. It is most desirable at all times that you upload yourself, but in case you cannot, we'll help. Also, if you see someone's links posted in that topic, feel free to attempt an upload to help others.
Upload to FTP (for large collections) (Bill_G); (access is anonymous) но тогда к файлам требуется индекс со столбцами как в **нашей БД.** Это наша помощь в оформлении в случаях очень крупных коллекций, когда трудно всё оформить в одиночку. Шаблон XLS таблицы для базы данных следует заполнить, что непонятно - пролустить. Критически важные поля - это **Filesize, MD5, Extension, Locator** (не **Filename**) остальное заполняется по вашему усмотрению.
FTP upload requires an index of uploaded files so that we can handle them and carefully place in the database. Use this method, if you have many books to upload at once, because Web-based uploading can get very tedious, if you need to sequentially upload 100 books. Use the template below, fill in the fields which make perfect sense to you, leave the others blank. Critical fields are **Filesize, MD5, Extension, Locator** (for the filename, but not field **Filename**) and they must be completed for each record. The other fields are at your discretion guided by the **database specification.** After upload is finished, drop a note in the forum so that they know it's finished and can be processed. To log-in to FTP, dont forget to specify the remote directory:

show
