Climate, Racial Category, and Body Proportions in the U.S.

A. THEODORE STEEGMANN, JR.\*  
*Department of Anthropology, University at Buffalo, Buffalo, New York 14261*

**ABSTRACT** In 1955, Newman and Munro reported correlations between physical characteristics and climate in a white male U.S. Army sample. For example, the body weight-to-mean annual temperature correlation was  $-0.460$ . Because the men descended from relatively recent immigrants to North America, physical clines implicitly derived from differential lifetime growth rather than from natural selection. Consequently, both causation and adaptive function of
